COPPER GROUP M01 FUNG	GICIDE
-----------------------	--------

For use in: listed citrus, listed vegetables, listed tree crops, listed small fruits, listed vines, listed field crops, listed greenhouses, listed turf and ornamentals

Active Ingredient:

Copper Hydroxide ^{*†} Other Ingredients: TOTAL:	
TOTAL:	100.0%
*Metallic Copper (Cu ²⁺) Equivalent. 50.0% by weight	[†] CAS No. 20427-59-2

KEEP OUT OF REACH OF CHILDREN DANGER - PELIGRO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

MANUFACTURED FOR:

Certis USA LLC 9145 Guilford Road, Suite 175 Columbia, MD 21046

ESL20231229 Ver:20240118

EPA Reg. No. 64744-5-70051 EPA Est. No. Net Contents:

This is a Specimen Label. It may not reflect the most-recent approved label for use in your state. Always refer to the label on the product packaging for approved use instructions. Please contact your Certis sales representative for more information.

FIRST AID					
If In Eyes:	 Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice. 				
If Swallowed:	 Call poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person. 				
If On Skin Or Clothing:	 Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice. 				
If Inhaled:	 Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible. Call a poison control center or doctor for treatment advice. 				
	HOTLINE NUMBER				
-	tainer or label with you when calling a poison control center or doctor or going for treatment. ct CHEMTEL (800) 255-3924 (24 hours) for emergency medical treatment information.				
Note to Physician: Proba	able mucosal damage may contraindicate the use of gastric lavage.				
See side/back panels for	additional precautionary statements.				

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS DANGER-PELIGRO

Corrosive. Causes irreversible eye damage. Harmful if swallowed. Harmful if absorbed through skin. Harmful if inhaled. Do not get in eyes, on skin or clothing. Avoid contact with skin. Avoid breathing vapor or spray mist. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE) Mixers, loaders, applicators and other handlers must wear:

- Long-sleeved shirt
- Long pants
- Shoes and socks
- Chemical resistant gloves made of any waterproof material including Barrier Laminate, Butyl Rubber ≥14 mils, Nitrile Rubber ≥14 mils, Neoprene Rubber ≥14 mils, Natural Rubber ≥14 mils, Polyethylene Polyvinyl Chloride (PVC) ≥14 mils, or Viton ≥14 mils
- Protective eyewear

Remove and wash contaminated clothing before reuse.

See engineering controls for additional requirements. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing and other absorbent materials that have been drenched or heavily contaminated with the product's concentrate. Do not reuse them.

ENGINEERING CONTROLS

Pilots must use an enclosed cab that meets the definition listed in the Worker Protection Standard (WPS) for agricultural pesticides [40CFR 170.305].

When handlers use enclosed cabs or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR Part 170.240 (d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

Fish Advisory Statement: This copper product is toxic to fish and aquatic organisms and may contaminate water through runoff. Unlike most organic pesticides, copper is an element and will not break down in the environment and will therefore accumulate in sediment with repeated applications. Copper is a micronutrient, but its pesticidal application rate exceeds the amount of copper needed as a nutrient.

This product has a potential for runoff for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this

product. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters or rinsate.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For requirements specific to your State or Tribe, consult the State or Tribe agency responsible for pesticide regulations.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses, and handlers of agricultural insecticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval (REI). The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 48 hours without required PPE.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, including plants, soil or water is:

- Coveralls
- Chemical-resistant gloves made of any waterproof material including Barrier Laminate, Butyl Rubber ≥14 mils, Nitrile Rubber ≥14 mils, Neoprene Rubber ≥14 mils, Natural Rubber ≥14 mils, Polyethylene Polyvinyl Chloride (PVC) ≥14 mils, or Viton ≥14 mils
- Shoes plus socks
- Protective eyewear

For Greenhouse Uses ONLY:

The 48 hour restricted-entry interval (REI) may be reduced to 24 hours, provided that the following conditions are met:

For at least seven days following the application of copper-containing products in greenhouses:

- At least one container or station designed specifically for flushing eyes is available in operating condition with the WPS-required decontamination supplies for workers entering the area treated with copper-containing products.
- Workers are informed orally, in a manner they can understand:
 - that residues in the treated area may be highly irritating to their eyes,
 - that they should take precautions, including refraining from rubbing their eyes, to keep the residues out of their eyes,
 - that if they do get residues in their eyes, they should immediately flush their eyes with the eye flush container or eye flush station that is located with the decontamination supplies, and
 - how to operate the eye flush container or eye flush station.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides 40 CFR Part 170. The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Do not enter or allow others to enter until sprays have dried.

PRODUCT INSTRUCTIONS

Kocide[®] 50DF may be applied as an aerial, ground dilute or ground concentrate spray unless specifically directed otherwise in the specific crop use directions.

The per acre use rate of Kocide[®] 50DF is applicable for both dilute and concentrate spraying. Depending upon the equipment used and the specific crop, the spray volume applied per acre will differ. Refer to Minimum Spray Volume Table. Complete spray coverage is essential to assure optimum performance from Kocide[®] 50DF. When treating by aerial application or with low volume application equipment, unless you have had specific previous experience, it is advisable to test for compatibility and tolerance to crop injury prior to full scale commercial utilization.

Consult the Kocide[®] 50DF label for specific rates and timing of application by crop. Where application rates and intervals are provided in a range (e.g., 4 to 12 pounds and 7 to 10 days), use the higher rates and shorter spray intervals when rainfall is heavy and/or disease pressure is high. Use the higher rates for large mature tree crops.

The Pre-Harvest Interval (PHI) for Kocide® 50DF is 0-days unless noted.

RESTRICTIONS:

- Do not tank mix Kocide[®] 50DF with any product containing aluminum tris (O-ethyl phosphonate) fungicide for use on any registered crops unless appropriate precautions have been taken to buffer the spray solution because severe phytotoxicity may result.
- Use in accordance with the most restrictive of label limitations and precautions. Do not exceed label dosage rates. This product cannot be mixed with any product containing a label prohibition against such mixing.
- This product may be reactive on masonry and metal surfaces including galvanized roofing. Avoid contact with metal surfaces. Do not spray on cars, houses, lawn furniture, etc.
- Not for residential use.
- Pilots must use an enclosed cab that meets the definition listed in the Worker Protection Standard (WPS) for agricultural pesticides [40CFR 170.305].

SPECIAL PRECAUTIONS:

- If Kocide[®] 50DF is applied in a spray solution having a pH of less than 6.5, phytotoxicity may occur.
- Environmental conditions including extended periods of wet weather, acid rain, etc. which alter the pH of the leaf surface may affect the performance of Kocide[®] 50DF resulting in possible phytotoxicity or loss of effectiveness.
- Agricultural chemicals may perform in an unpredictable manner when tank mixed, especially where several products are involved. Reduced effect on pests or crop injury may occur. Unless specified on this label or by a State/local expert, it is advisable to test for compatibility and potential crop injury prior to commercial use of a new tank mix.
- It must be determined if proper application equipment is available and if waste associated with its use can be properly handled. Agricultural chemicals are often reactive with the materials used in the construction of application equipment, including aluminum, rubber, and some synthetic materials. This factor must be taken into consideration when selecting proper

application equipment. It is necessary that all application equipment be thoroughly flushed with clean water after each day's use.

- Apply this product only through one or more of the following types of systems: sprinkler, including center pivot, lateral move, traveler, big gun, or plastic pipe solid set systems. Do not apply this product through any other type of irrigation system. In California, do not apply in systems which contain aluminum parts or components.
- While volume is important in obtaining full spray coverage, often factors including foliage density, environmental conditions and sprayer calibration have a greater impact. Always be sure that sprayers are calibrated to spray equipment manufacturer's specifications and environmental conditions are within those specified by State and local regulatory authorities.
- When mixing, fill the spray tank one-half full with water. Add Kocide[®] 50DF slowly to tank while hydraulic or mechanical agitation is operating and continue filling with water. Spreaders, stickers, insecticides, nutrients, etc. should be added last. If compatibility is in question, use the Compatibility Jar Test before mixing a whole tank or contact your chemical supplier. Observe all precautions and limitations on the labels of all products used in mixtures.
- It is the pesticide user's responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

RESISTANCE MANAGEMENT

COPPER GROUP M01 FUNGICIDE

For resistance management, Kocide[®] 50DF contains a Group M01 fungicide. Any fungal population may contain individuals naturally resistant to Kocide[®] 50DF and other Group M01 fungicides. A gradual or total loss of pest control may occur over time if these fungicides are used repeatedly in the same fields. Appropriate resistance management strategies should be followed. To delay fungicide resistance, take one or more of the following steps:

- Rotate the use of Kocide[®] 50DF or other Group M01 fungicides within a growing year sequence with different groups that control the same pathogens.
- Avoiding the consecutive use of Kocide[®] 50DF or other target site of action Group M01 fungicides/bactericides that might have a similar target site of action, on the same fungal pathogen species.
- Use tank mixtures with fungicides from a different group that are equally effective on the target pest when such use is permitted. Use at least the minimum application rate as labeled by the manufacturer.
- Adopt an integrated disease management program for fungicide use that includes scouting, uses historical information related to pesticide use, and crop rotation, and which considers host plant resistance, impact of environmental conditions on disease development, disease thresholds, as well as cultural, biological and other chemical control practices.
- Where possible, make use of predictive disease models to effectively time fungicide applications. Note that using predictive models alone is not sufficient to manage resistance.
- Monitor treated fungal populations for resistance development.
- Contact your local extension specialist or certified crop advisor for any additional pesticide resistance management and/or IPM specifications for specific crops and pathogens.
- For further information or to report suspected resistance contact your local Certis USA LLC representative. You can also contact your pesticide distributor or university extension specialist to report resistance.

SPRAY DRIFT

A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, relative humidity) and method of application (e.g., ground, aerial, airblast, chemigation) can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

Aerial Applications:

- Do not release spray at a height greater than 10 ft. above the vegetative canopy or water, unless a greater application height is necessary for pilot safety.
- Applicators are required to use a medium or coarser droplet size (ASABE S572.1).
- Do not apply when wind speed exceeds 15 mph at the application site. If the winds speed is greater than 10 mph, the boom length must be 65% or less of the wingspan for fixed wing aircraft and 75% or less of the rotor diameter for helicopters. Otherwise, the boom length must be 75% or less of the wingspan for fixed-wing aircraft and 90% or less of the rotor diameter for helicopters.
- Applicators must use ½ swath displacement upwind at the downwind edge of the application area.
- Do not apply during temperature inversions.

Ground Boom Applications:

- Apply with the spray release height specified by the manufacturer, but no more than 4 feet above the ground or crop canopy.
- Applicators are required to use a medium or coarser droplet size (ASABE S572.1).
- Do not apply when wind speeds exceed 15 mph at the application site.
- Do not apply during temperature inversions.

SPRAY DRIFT ADVISORIES

THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT. BE AWARE OF NEARBY NON-TARGET SITES AND ENVIRONMENTAL CONDITIONS.

IMPORTANCE OF DROPLET SIZE

An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

Controlling Droplet Size – Ground Boom

- **Volume** Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate.
- **Pressure** Use the lowest spray pressure specified for the nozzle to produce the target spray volume and droplet size.
- **Spray Nozzle** Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to reduce drift.

Controlling Droplet Size – Aircraft

• Adjust Nozzles - Follow nozzle manufacturers' specifications for setting up nozzles. Generally, to reduce fine droplets, nozzles must be oriented parallel with the airflow inflight.

BOOM HEIGHT – Ground Boom

Use the lowest boom height that is compatible with the spray nozzles that will provide uniform coverage. For ground equipment, the boom must remain level with the crop and have minimal bounce.

RELEASE HEIGHT – Aircraft

Higher release heights increase the potential for spray drift. When applying aerially to crops, do not release spray at a height greater than 10 ft. above the crop canopy, unless a greater application height is necessary for pilot safety.

SHIELDED SPRAYERS

Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

TEMPERATURE AND HUMIDITY

When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.

TEMPERATURE INVERSIONS

Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.

WIND

Drift potential generally increases with wind speed. AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS. Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

Other State and Local Requirements:

Applicators must follow all State and local pesticide drift requirements regarding application of copper compounds. Where states have stringent regulations, they must be observed.

CHEMIGATION INSTRUCTIONS

Do not apply this product through any irrigation (chemigation) system using aluminum parts or components as damage to the system may occur. Such application is prohibited regardless of whether the irrigation system is flushed with water after use of this product.

Apply this product only through one or more of the following types of systems: sprinkler, including center pivot, lateral move, traveler, big gun, or plastic pipe solid set system(s) which contain no aluminum parts or components. Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness or illegal pesticide residues in the crop can result from nonuniform distribution of treated water.

If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Shut off injection equipment after treatment and continue to operate irrigation system until Kocide[®] 50DF has been cleared from the last sprinkler head.

Posting of areas to be chemigated is required when 1) any part of a treated area is within 300 feet of sensitive areas including residential areas, labor camps, businesses, day care centers, hospitals, in-patient clinics, nursing homes or any public areas including schools, parks, playgrounds, or other public facilities not including public roads, or 2) when the chemigated area is open to the public including golf courses or retail greenhouses.

Posting must conform to the following requirements. Treated areas shall be posted with signs at all usual points of entry and along likely routes of approach from the listed sensitive area. When there are no usual points of entry, signs must be posted in the corners of the treated areas and in any other locations affording maximum visibility to sensitive areas. The printed side of the sign should face away from the treated area towards the sensitive area. The signs shall be printed in English. Signs must be posted prior to application and must remain posted until foliage has dried and soil surface water has disappeared. Signs may remain in place indefinitely as long as they are composed of materials to prevent deterioration and maintain legibility for the duration of the posting period.

All words shall consist of letters at least 2 1/2 inches tall, and all letters and the symbol shall be a color which sharply contrasts with their immediate background. At the top of the sign shall be the words KEEP OUT, followed by an octagonal stop sign symbol at least 8 inches in diameter containing the word STOP. Below the symbol shall be the words PESTICIDES IN IRRIGATION WATER.

CHEMIGATION SYSTEMS CONNECTED TO PUBLIC WATER SYSTEMS

Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

Chemigation systems connected to public water systems must contain a functional, reducedpressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into the reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, including a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

IMPORTANT: It must be determined if proper application equipment is available and if waste associated with its use can be properly handled. Agricultural chemicals are often reactive with the materials used in the construction of application equipment, including aluminum, rubber and some synthetic materials. This factor should be taken into consideration when selecting proper application equipment. It is necessary that all application equipment be thoroughly flushed with clean water after each day's use.

When mixing, fill the nurse tank half full with water. Add Kocide[®] 50DF slowly to tank while hydraulic or mechanical agitation is operating and continue filling with water. Stickers, spreaders, insecticides, nutrients, etc. should be added last. If compatibility is in question, use the Compatibility Jar Test before mixing a whole tank. Because of the wide variety of possible combinations which can be encountered, observe all precautions and limitations on the labels of all products used in mixtures. Agitate the mixture in the nurse tank.

Kocide[®] 50DF should be added through a traveling irrigation system continuously or at the last 30 minutes of solid set irrigation systems. Shut off injection equipment after treatment and continue to operate irrigation system until Kocide[®] 50DF has been cleared from the last sprinkler head.

SPRINKLER CHEMIGATION

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

The pesticide injection pipeline must also contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, including a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

NOTE: It must be determined if proper application equipment is available and if waste associated with its use can be properly handled. Agricultural chemicals are often reactive with the materials used in the construction of application equipment, including aluminum, rubber and some synthetic materials. This factor should be taken into consideration when selecting proper application equipment. It is necessary that all application equipment be thoroughly flushed with clean water after each day's use. When mixing, fill the nurse tank half full with water. Add Kocide[®] 50DF slowly to tank while hydraulic or mechanical agitation is operating and continue filling with water. Stickers, spreaders, insecticides, nutrients, etc. should be added last. If compatibility is in question, use the Compatibility Jar Test before mixing a whole tank. Because of the wide variety of possible combinations which can be encountered, observe all precautions and limitations on the labels of all products used in mixtures.

Agitate the mixture in the nurse tank.

Kocide[®] 50DF should be added through a traveling irrigation system continuously or at the last 30 minutes of solid set irrigation systems. Shut off injection equipment after treatment and continue to operate irrigation system until Kocide[®] 50DF has been cleared from the last sprinkler head.

APPLICATION INSTRUCTIONS

Minimum Spray Volume (Gallons Per Acre) When Applying Kocide[®] 50DF

**Pesticide application equipment including "Curtec" or other similar sprayers which are capable of obtaining thorough coverage at low volumes may be used at as low as 20 gallons per acre of spray volume.

The specifications of State Agricultural Extension Services should be closely followed as to timing, frequency, and number of sprays per year.

FROST INJURY PROTECTION BACTERIAL ICE NUCLEATION INHIBITOR

Application of Kocide[®] 50DF made to all crops listed on this label at rates and stages of growth indicated on this label, at least 24 hours prior to anticipated frost conditions, will afford control of ice nucleating bacteria (*Pseudomonas syringae*, *Erwinia herbicola*, and *Pseudomonas fluorescens*) and may therefore provide some protection against light frost. Do not use Kocide[®] 50DF for those geographical areas where weather conditions favor severe frost.

CITRUS

Grapefruit, Kumquat, Lemon, Lime, Orange, Pummelo, Tangelo and Tangerine

Kocide[®] 50DF may be mixed with dry foliar nutritionals (micronutrients) to create "Shot Bag" mixes to meet the various nutritional requirements of citrus and provide disease protection as described on this label. Kocide[®] 50DF per acre rates in these mixes must not exceed the maximum labeled rates for disease control.

Adding foliar nutritionals or other products to spray mixtures containing Kocide[®] 50DF and applying to citrus during the post-bloom period when young fruit are present may result in spray burn.

Disease	Application Rate/Acre	Maximum Annual Rate/Acre	Use Instructions
Algal Spot	3 – 6.3 lbs. (1.5-3.15 lbs. metallic copper)	25.1 lbs. (12.6 lbs. metallic copper)	Apply as pre-bloom and post-bloom sprays. Use the higher rates when conditions favor disease. Minimum retreatment interval is 7 days.
Melanose, Scab	2 – 6.3 lbs. (1-3.15 lbs. metallic copper)		Apply as pre-bloom and post-bloom sprays. Use the higher rates when conditions favor disease. Minimum retreatment interval is 7 days.
Greasy Spot, Pink Pitting	2 – 6.3 lbs. (1-3.15 lbs. metallic copper)		Apply in summer on expanded new flush. Repeat on subsequent flushes where disease pressure is severe. Use the higher rates when conditions favor disease. Minimum retreatment interval is 7 days.
Alternaria Brown Spot	4 – 6.3 lbs. (2-3.15 lbs. metallic copper)		On susceptible varieties apply when the first spring flush appears and each flush thereafter. Application to fruit must start after two thirds of the petals have fallen and be repeated on a 7- to 21-day schedule if needed. Use the higher rates when conditions favor disease. Minimum retreatment interval is 7 days.
Phytophthora			Begin application in fall before or just after the first rain and continue if needed. Use the higher rates when conditions favor disease. Minimum retreatment interval is 7 days. IMPORTANT: In California, in areas subject to copper injury, add 0.25 to 0.5 pound of high-quality lime per pound of Kocide [®] 50DF.
Brown Rot, Septoria Spot	2 – 6.3 lbs. (1-3.15 lbs. metallic copper)		Begin application in fall before or just after the first rain and continue if needed. For Brown Rot only, apply to skirts of trees to a height of at least 4 feet. For control of Septoria Spot or where fruit have already been infected with Brown Rot, apply to entire tree. Apply also to bare ground one foot beyond skirt. Use the higher rates when conditions favor disease. Minimum retreatment interval is 7 days.
			IMPORTANT: In California, in areas subject to

			copper injury, add 0.25 to 0.5 pound of high- quality lime per pound of Kocide [®] 50DF.
Phytophthora Foot Rot	1 lbs. (0.5 lbs. metallic copper)		Mix at a 1 pound to 0.5 to 1 gallon of water ratio, "Tre-Hold" or latex paint. Paint trunks of trees from the soil surface to the lowest scaffold limbs. Apply in May prior to summer rains and/or in the fall prior to wrapping trees for freeze protection. Treatment serves as protection for up to 1 year, but does not cure existing infections.
			IMPORTANT: Areas where microjet or low volume irrigation hit the tree trunk may require retreatment due to wash off.
Citrus Canker (suppression)	6.3 lbs. (3.15 lbs. metallic copper)		Spray flushes 7 to 14 days after shoots begin to grow. Young fruit may require an additional application. Number and timing of applications will be dependent upon disease pressure. Under heavy pressure, spray each flush of new growth.
Black Spot***	3.5 – 6.3 lbs. (1.75-3.15 lbs. metallic copper)	-	Minimum retreatment interval is 7 days. Begin treatment prior to or when disease first appears and repeat every 7 to 21 days if needed. Use the higher rates and shorter spray intervals when conditions favor disease. Minimum retreatment interval is 7 days.
NOTE: Phytotox seedlings growr	• •		tender flush when Kocide [®] 50DF is applied to citrus houses.
Restriction: • Maximum sing	le application nore than 4 ap atment interva	is 6.3 lbs./A plications pe Il is 7 days.	(3.15 lbs. metallic copper equivalent). er year at the maximum single application rate.

- Do not make more than 10 applications per year at the maximum single application rate.

CONIFERS

For use on conifers, including Douglas Fir, Fir, Juniper, Leyland Cypress, Pine and Spruce, in Christmas tree plantings and silviculture nurseries.

For control of foliar diseases, apply Kocide[®] 50DF as a thorough cover spray at rates ranging from 1.5 to 4 pounds (0.75-2 lbs. metallic copper) per acre. Begin applications in the spring at the initiation of new growth and repeat at 7- to 30-day intervals if needed. Use the higher rates when disease pressure is severe or when environmental conditions favor disease development. Maximum annual rate per acre is 40 pounds of product (20 pounds metallic copper).

Kocide[®] 50DF is registered for use on the listed conifers for control of the following diseases.

Сгор	Scientific Name	Disease
Douglas Fir	Pseudotsuga menziesii	Rhabdocline Needlecast
Fir	Abies spp.	Needlecasts
Juniper	<i>Juniperus</i> spp.	Anthracnose, Phomopsis Twig Dieback
Leyland Cypress	X Cupressocyparis leylandii	Cercospora Needle Blight
Pine	Pinus spp.	Needlecasts
Spruce	Picea spp.	Needlecasts

Lichens: To control lichens on any of the conifers above, apply 3 to 4 pounds of Kocide[®] 50DF per acre as a dormant application before new growth emerges in the spring. The addition of a non-ionic surfactant will improve control. A second application may be required after 12 months.

RESTRICTION:

- Do not buffer or combine with emulsifiable concentrate insecticides.
- Minimum retreatment interval is 7 days.
- Maximum single application rate is 4.0 lbs./A (2.0 lbs. metallic copper equivalent).
- Do not apply more than a maximum 40 lbs. of product (20 lbs. metallic copper) per acre per year.
- Do not make more than 10 applications per year at the maximum single application rate.

GREENHOUSE AND SHADEHOUSE CROPS

Notice to User: Kocide[®] 50DF may be used in greenhouses and shadehouses to control diseases on crops which appear on this label, and specific instructions have been developed for the crops listed. The grower should bear in mind that the sensitivity of crops grown in greenhouses and shadehouses differs greatly from crops grown under field conditions. Neither the manufacturer nor seller has determined whether or not Kocide[®] 50DF can be used safely on all greenhouse and shadehouse grown crops. The user must determine if Kocide[®] 50DF can be used safely prior to commercial use. In a small area, apply the specified rates to the plants in question, e.g., foliage, fruit, etc., and observe for 7 to 10 days for symptoms of phytotoxicity prior to commercial use. Consequently, injuries arising from the use of Kocide[®] 50DF on these types of greenhouse and shadehouse crops are the responsibility of the user.

Apply Kocide[®] 50DF according to specific rates given for those crops in pounds per acre. **Two level tablespoons of Kocide[®] 50DF per 1,000 square feet is equivalent to 1.56 pounds of product per acre.** Apply Kocide[®] 50DF in adequate water for thorough coverage of plant parts. Begin application at first sign of disease and repeat if needed; use shorter spray intervals during periods when severe disease conditions persist. For maximum annual rates per acre, refer to the crop specific directions.

Citrus (Non-Bearing	Brown Rot,	8 TBSP.	Begin applications
Nursery)	Citrus Canker,	(3.12 lbs. metallic	when disease first
	Greasy Spot,	copper per acre)	threatens. Repeat at 7-
	Melanose,		to 30-day intervals if
	Pink Pitting,		needed depending on
	Scab		disease severity.
			 Restrictions: Do not make more than 4 applications per year at the maximum single application rate. Maximum annual rate is 25.2 lbs./A (12.6 lbs. metallic copper equivalent). Maximum single application rate is 8 TBSP (3.12 lbs. metallic copper equivalent). The minimum interval between treatments is 7 days.
Cucumber	Angular Leaf Spot,	2.5 TBSP.	Apply at 5- to 7-day
	Downy Mildew	(1.05 lbs. metallic	intervals when plants
		copper per acre)	begin to vine.
			Restrictions:
			 Do not make more
			than 5 applications
			per year at the
			maximum single

IMPORTANT: Phytotoxicity may occur on young tender flush when Kocide[®] 50DF is applied to citrus seedlings grown in greenhouses or shadehouses.

			 application rate. Maximum annual rate is 10.5 lbs./A (5.25 lbs. metallic copper equivalent). Maximum single application rate is 2.5 TBSP (1.05 lbs. metallic copper 	
			equivalent). • The minimum interval between treatments is 5 days.	
Eggplant	Alternaria Blight, Anthracnose, Phomopsis	2 TBSP. (0.78 lbs. metallic copper per acre)	 Begin applications prior to development of disease symptoms. Repeat sprays at 7- to 10- day intervals if needed depending on disease severity. Restrictions: Do not make more than 10 applications per year at the maximum single application rate. Maximum annual rate is 15.8 lbs./A (7.9 lbs. metallic copper equivalent). Maximum single application rate is 2 TBSP (0.78 lbs. metallic copper equivalent). The minimum interval between treatments is 7 days. 	
Pepper	Bacterial Spot	2 TBSP. (0.78 lbs. metallic copper per acre)	Begin applications when conditions first favor disease development and repeat at 3- to 10-day intervals if needed depending on disease severity.	

			 Restrictions: Do not make more than 15 applications per year at the maximum single application rate. Maximum annual rate is 23.7 lbs./A (11.9 lbs. metallic copper equivalent). Maximum single application rate is 2 TBSP (0.78 lbs. metallic copper equivalent). The minimum interval between treatments is 3 days. 	
Tomato (fresh market)	Anthracnose, Bacterial Speck, Bacterial Spot, Early Blight, Gray Leaf Mold, Late Blight, Septoria Leaf Spot	1.25 TBSP. (0.53 lbs. metallic copper per acre)	 Begin applications when disease first threatens and repeat at 3- to 10-day intervals if needed depending on disease severity. Restrictions: Do not make more than 12 applications per year at the maximum single application rate. Maximum annual rate is 16.0 lbs./A (8.0 lbs. metallic copper equivalent). Maximum single application rate is 1.25 TBSP (0.53 lbs. metallic copper equivalent). The minimum interval between treatments is 3 days. 	

ORNAMENTALS

Use Kocide[®] 50DF for control of bacterial and fungal diseases of foliage, flowers and stems on ornamentals in greenhouses, shade houses, outdoor nurseries and outdoor landscape plantings.

For ornamental crops in dormancy, apply as a thorough cover spray at rates ranging from 1.0 to 4.0 pounds (0.5-2 lbs. metallic copper) per acre of Kocide[®] 50DF. When new growth is present, apply as a thorough cover spray at rates ranging from 1.0 to 2.0 pounds (0.5-1 lbs. metallic copper) per acre of Kocide[®] 50DF. Two level tablespoons of Kocide[®] 50DF per 1,000 square feet is equivalent to 1.56 pounds of product per acre. Begin application at first sign of disease and repeat at 7- to 14-day intervals if needed; use the higher rates and shorter spray intervals during periods of frequent rains or when severe disease conditions persist. Maximum annual rate per acre is 40 pounds (20 lbs. metallic copper).

Kocide[®] 50DF may be used alone or in combination with other fungicides registered for use on ornamentals as a maintenance spray. Use in accordance with the most restrictive of label limitations and precautions. Do not exceed label dosage rates. This product cannot be mixed with any product containing a label prohibition against such mixing.

Notice to User: Plant sensitivities to Kocide[®] 50DF have been found to be acceptable for the specific genera and species listed on this label under the conditions tested. However, phytotoxicity may occur. Due to the large number of species and varieties of ornamental and nursery plants, and the wide range of growing conditions, it is impossible to test every one for sensitivity to Kocide[®] 50DF. Neither the manufacturer nor seller has determined whether or not Kocide[®] 50DF can be safely used on ornamental or nursery plants not listed on this label. The user must determine if Kocide[®] 50DF can be used safely prior to commercial use. In a small area, apply the specified rates to the plants in question, i.e., bedding plants, foliage, etc., and observe for 7 to 10 days for symptoms of phytotoxicity prior to commercial use.

Restrictions:

- Minimum retreatment interval is 7 days.
- Maximum annual rate for Easter Lilies is 75 lbs. metallic copper. If used at this rate for Easter Lilies, do not add any additional copper pesticides to this land for 36 months.
- Maximum single application rate is 4.0 lbs./A (2.0 lbs. metallic copper equivalent).
- Maximum annual rate for Ornamentals (except Easter Lilies) is 20 lbs. metallic copper.
- This product may be reactive on masonry and metal surfaces including galvanized roofing. Avoid contact with metal surfaces. Do not spray on cars, houses, lawn furniture, etc.
- Do not make more than 37 applications per year at the maximum single application rate for Easter Lilies.
- Do not make more than 10 applications per year at the maximum single application rate for Ornamentals (except Easter Lilies).

Сгор	Scientific Name	Disease
Aglaonema***	Aglaonema spp.	Bacterial Leaf Spot
Althea (Rose of Sharon)	Hibiscus syriacus	Bacterial Leaf Spot

Sycamore	Platanus spp.	Anthracnose, Leaf Spots***
Tulip	<i>Tulipa</i> spp.	Anthracnose, Botrytis Blight
Umbrella Tree***	Schefflera spp.	Bacterial Leaf Spot
Verbena	Verbena spp.	Xanthomonas Leaf Spot
Viburnum	Viburnum odoratissimum, V. plicatum, V. suspensum	Anthracnose
Viola (Pansy, Violet)	Viola spp.	Downy Mildew
Willow	Salix spp.	Anthracnose
Yew***	Taxus spp.	Needle Blight
Yucca (Adam's Needle)	Yucca spp.	Cercospora Leaf Spot, Septoria Leaf Spot
Zinnia***	Zinnia spp.	Leaf Spots

¹ Discoloration of foliage and/or blooms have been noted on some varieties. To prevent residues on commercial plants, do not spray immediately before selling season.

² Hibiscus - Do not apply to plants in flower.

³ For Indian Hawthorn use 2 to 3 pounds per acre.

⁴ Some cultivars may be sensitive to Kocide[®] 50DF.

⁵ Apply Kocide[®] 50DF at 3.0 – 5.0 pounds per acre (1.5-2.5 pounds metallic copper). Maximum annual rate per acre is 150 pounds (75 lbs. metallic copper). Do not apply any additional copper pesticide to this land for 36 months. Minimum retreatment interval is 7 days.

⁶ Apply dormant through bloom only.

IMPORTANT: Phytotoxicity may depend on varietal differences. If unfamiliar with the use of Kocide[®] 50DF, apply the specified rate to a few plants and observe after 7 to 10 days for symptoms of phytotoxicity.

Control of Ball Moss***, **Spanish Moss***** and Lichens*** on Ornamental and Shade **Trees:** Apply Kocide[®] 50DF in early spring when the trees are dormant. Apply 3 to 4 pounds of Kocide[®] 50DF in 100 gallons of water, using 1.5 gallons of spray per foot of tree height. Be sure to thoroughly wet ball moss tufts, Spanish moss or lichens. The addition of a nonionic surfactant will improve control. A second application may be required after 12 months.

IMPORTANT: Kocide® 50DF may be injurious to some ornamental plants growing beneath the trees.

Cold Storage Protection for Dormant Rootstock***: To protect bare-root nursery trees from Phytophthora Crown Rot and Botrytis, use 1.5 to 2 pounds of Kocide[®] 50DF per 100 gallons of water. Apply as a dip or spray to the roots and lower stems of dormant rootstock prior to placing in cold storage. Do not apply to rootstock less than 2 years old. ***Not registered for use in California.

TURF

For control of algae in turfgrasses on sod farms, golf courses, cemeteries, and industrial turf areas. Apply 3 to 6 pounds (1.5-3 lbs. metallic copper) per acre (1.1 to 2.2 oz. per 1,000 square feet). Apply in sufficient water to provide adequate coverage. Kocide[®] 50DF may be used alone or in combination with other registered turf fungicides as a maintenance spray. Observe all precautions and limitations on the label of each product used in tank mixes.

Restrictions:

- Minimum retreatment interval is 10 days.
- Maximum single application rate is 6 pounds per acre (3 pounds metallic copper equivalent).
- Maximum annual application rate is 42 pounds per acre (21 pounds metallic copper equivalent).
- Do not make more than 7 applications per year at the maximum single application rate.
- Phytotoxicity may occur depending on varietal differences. Apply the specified rate to a small area and observe for 7 to 10 days for signs of injury. If phytotoxicity occurs, discontinue use. Do not apply in spray solutions with a pH of less than 6.5.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store in a cool, dry place in original container.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Disposal: (Paper Bag or Plastic Bag)

Nonrefillable container. Do not reuse or refill this container. Completely empty bag into application equipment by shaking and tapping sides and bottom to loosen clinging particles. When completely empty, offer for recycling if available, or dispose of bag in a sanitary landfill.

NOTICE TO BUYER: Purchase of this material does not confer any rights under patents of countries outside of the United States.

LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read this Limitation of Warranty and Liability Before Buying or Using This Product. If the Terms Are Not Acceptable, Return the Product at Once, Unopened, and the Purchase Price Will Be Refunded.

It is impossible to eliminate all risks associated with the use of this product. Such risks arise from weather conditions, soil factors, off target movement, unconventional farming techniques, presence of other materials, the manner of use or application, or other unknown factors, all of which are beyond the control of Certis USA LLC. These risks can cause: ineffectiveness of the product, crop injury, or injury to non-target crops or plants. WHEN YOU BUY OR USE THIS PRODUCT, YOU AGREE TO ACCEPT THESE RISKS.

Certis USA LLC warrants that this product conforms to the chemical description on the label thereof and is reasonably fit for the purpose stated in the Directions for Use, subject to the inherent risks described above, when used in accordance with the Directions for Use under normal conditions.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, CERTIS USA LLC MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR OF MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, IN NO EVENT SHALL CERTIS USA LLC OR SELLER BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT. BUYER'S OR USER'S BARGAINED-FOR EXPECTATION IS CROP PROTECTION. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER AND THE EXCLUSIVE LIABILITY OF CERTIS USA LLC OR SELLER, FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY OR CONTRACT, NEGLIGENCE, TORT OR STRICT LIABILITY), WHETHER FROM FAILURE TO PERFORM OR INJURY TO CROPS OR OTHER PLANTS, AND RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT, OR AT THE ELECTION OF CERTIS USA LLC OR SELLER, THE REPLACEMENT OF THE PRODUCT.

To the extent consistent with applicable law that allows such requirement, Certis USA LLC or your Ag Retailer must have prompt notice of any claim so that an immediate inspection of buyer's or user's growing crops can be made. Buyer and all users shall promptly notify Certis USA LLC or your Ag Retailer of any claims, whether based on contract, negligence, strict liability, other tort or otherwise, or be barred from any remedy.

This Limitation of Warranty and Liability may not be amended by any oral or written agreement.
